CareTrade

DAIRY HYGIENE

First edition

An S&E Caretrade Company

Welcome & Introduction

Welcome to our Dairy Hygiene Brochure.

Over 40 years ago S&E CareTrade set out to offer a great product range at highly competitive prices, all backed by a focus on providing the best customer care & technical support possible.

Today, we continue to work tirelessly to make life as easy as possible for our customers. Indeed, by treating our customers, as we would wish to be treated ourselves, we build long term partnerships; time and again.

Working with you to achieve the highest standards possible.

We are one of the fastest growing dairy hygiene specialists in Ireland, dedicated to the very latest products and solutions, all backed by an unwavering focus on the very best customer service possible.

Making your life easier.

We only offer the very best products available and our considerable stock holding enables us to provide prompt and efficient delivery when and where suits you.

Please get in touch to find out how we can help.

Our Dairy Hygiene & Agri Division aims to become the most valued supplier across Ireland and we trust you find this brochure helpful and informative. We look forward to growing our relationship with you and if you would like to know more, please do get in touch.

Tim Hughes

Our Values:

What's important to us - Providing value in everything we do

What our customers are saying:

"I was sceptical about using the PURE-FOAM SYSTEM, but having tried it I would recommend it to anyone"

Stephen McCammond - Antrim

"It's a pleasure working with the S&E team, nothing is ever too much trouble and they work hard to always understand what's important to us"

Danielle McKendry - J A Humphrey Farm, Coleraine

"The new foaming system makes pre-dipping a lot quicker and it is clearly having a positive effect."

Morrell McCollum

"I am so pleased with your PURE-FOAM SYSTEM, my cell count is the lowest it's ever been."

Charles Weir

"I am really pleased with Slurry Cell the bacteriological slurry treatment & would recommend it to anyone"

Robin Stirling

Call us if you want to speak to any of our existing customers to find out more about working with Agri CareTrade.

Mastitis Management

The importance of dealing with infection

Of the three major dairy herd problems, Mastitis, Fertility and Lameness, it's Mastitis that costs the most; anything from £70 to £250/per annum per cow.

MASTITIS

Mastitis is an inflammation of the mammary gland associated with bacterial infection.

It is caused by pathogenic micro-organisms that enter the udder through the teat canal, damaging the mammary tissue. This causes increased vascular permeability, changing the composition of the milk cell count & quality.

The two types of Mastitis:

Clinical Mastitis

An inflammatory response to infection causing visibly abnormal milk (in terms of colour, fibrin clots etc.). As the inflammation increases changes in the udder occur including swelling, an increase in temperature, redness, and blotches. The animal suffers increased pain.

"Mint cream available to soothe and cool inflamed udders."

(500ml & 2.5 litres)

Sub-Clinical Mastitis

This type carries no visible signs of infection, and is the most common form. .

As a result, detection is best achieved by examining the milk for somatic cell count using the California Mastitis Test or an automated method. Somatic cell counts positively correlate with the presence of infection.

Cows with a cell count of >280,000 cells/ml are more than 80% likely to be infected. Similarly, the higher the cell count in a bulk tank, the more likely there is an infection in the herd.

Cows are at risk of Mastitis

- ✓ During milking - if teat preparation prior to milking has been limited or non-existent
- ✓ After milking - if the teat sphincters remain open and the cow lies down in a dirty area
- ✓ During "dry" periods

Mastitis Management & Detection

We strongly recommend all dairy farmers sign up to milk recording as a high somatic cell count is an indication of Mastitis. Alternatively, spot checks for small samples can be taken using the California Milk Test.

The Diagnostic Kenotest

Rapidly detects early signs of Subclinical Mastitis. Using the CMT method and a specially designed test-pallet, it assesses the level of somatic cells present in the milk.

Available in 1L quantities

Fore-stripping is also a useful way of identifying abnormal milk before it is added to the bulk tank. Ideally it is drawn onto a dark surface to make changes in the milk more visible.

Once milk recording is underway, quality analysis of the results is critical. Many vets offer this service, or Agri CareTrade can assist with details of a Mastitis Management Programme.

Don't forget the importance of Teat Skin Condition!

Teat skin condition is a key part of any Mastitis Management Programme. Chapped and cracked teats encourage the development of bacteria. Germs like *Staphylococcus aureus* or *Streptococcus agalactiae* thrive in these warm, humid and nutrient rich conditions.

The five types of teat condition

Teat skin is severely damaged and ulcerative with scabs or open lesions. Large and/or numerous warts, which interfere with teat end function.

Teat skin is chapped and cracked, indicating inflammation is present. Numerous warts may be present.

Teat skin is chapped. Some small warts may be present.

Teat skin shows some evidence of scaling.

Teat skin is smooth, free from scales, cracks or chapping.

Score 5

Score 4

Score 3

Score 2

Score 1

Pre-Dipping

WHY PRE-DIP?

Quicker

Simply, pre-dipping can dramatically improve your milking routine. The two graphs illustrate how pre-dipping reduces milking times.

Graph 1 – standard milking practice; the cluster is attached to teats and between 60 to 90 seconds later the main milk draw commences

Graph 2 – when applying Keno-Pure using the Pure-Foamer the teat is stimulated and the cluster is then attached, ideally within 90 seconds and the “let down” is significantly faster, thereby reducing the cluster “on time”

1 minute of preparation reduces the milking time by up to 2 minutes⁽¹⁾.

There are many ways to prepare a cow before milking, including re-useable cloths, spraying & dipping cups.

Research shows that cloths increase the risk of cross contamination, whilst spraying is often inaccurate and wasteful; dramatically increasing the amount of solution required.

Pre-dipping is the most effective teat preparation as the foam is applied only to the teat. This avoids contamination of the teat end by water borne dirt.

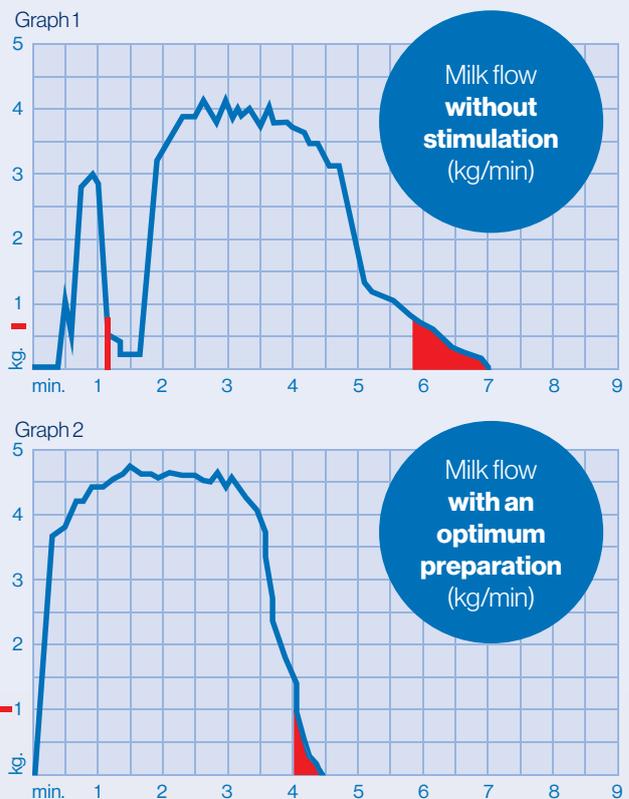

Using a foaming dip cup is an effective but labour intensive approach. The Pure-Foamer overcomes these issues minimising the risks of of carpal tunnel, repetitive strain injury and potentially even arthritis, taking teat preparation to the next level.

Cleaner - Better Quality Milk

The process using the Pure-Foamer was assessed using the TEAT CLEANLINESS SCORING CHART. 91.6% of the teats scored 1 (free of dirt) or 2 (slight dirt). An added benefit is reduced Bacto Count/Total Bacterial Count⁽²⁾.

Complete

Correct preparation will optimise milk release and maximise volumes.

“The red areas represent periods when low milk flow significantly increases the risk of Bacteria entering the teat.”

(1) Source: Precision Milking; DVM Dan Humphries & DVM Tom Greenham
(2) Source: University of Ghent.

Pre-Dipping

Cleaning and sanitising the teats before milking is critical, particularly where cows share the milking equipment and the risk of contamination is high.

KenoPure Foaming PRE-DIP

HIGHLY EFFECTIVE

The perfect partner for your PURE FOAMER

- ✓ VMD registered (EN1656) medicinal pre-dip
- ✓ Fast acting disinfection within 30 seconds
- ✓ Concentrated lactic acid based
- ✓ Contains Glycerine and Eucalyptus oil for improved teat conditioning
- ✓ Highly cost effective

Benefits to the Cow:

KenoPure offers the gold standard in both teat cleaning and moisturising. It's a proven disinfectant and is economical to use given the low concentration levels required.

Use KenoPure with the Pure Foaming System to enhance your milking routine, reducing time and costs.

Available in 25L jars

FOR BETTER MILK YIELDS

"Ask for a demo today, to keep me contented, happy and healthy."

Post Dipping

MEDICINAL TEAT DIPS

The very best dips condition and disinfect the teat by covering it in a thick viscose layer, protecting it until it closes.

Research by the National Mastitis Council has shown that intra mammary infection can be reduced by 50% compared with no disinfectant being applied. The disinfectants do not treat existing mammary gland infections, but will restrict or reduce the colonisation of the teat duct.

KenoStart

3mg/g iodine.
Teat Dip Solution
for dairy cattle

An iodine based teat dip, used as a key component of any Mastitis Management Programme and registered for use in 13 countries.

Available in 20L, and 200L quantities

KenoStart Spray & Dip

3mg/g iodine.
Teat Dip or Spray
Solution for
dairy cattle.

Kenostart Spray and Dip is a sprayable iodine teat dip, registered in 15 countries across Europe. It adheres to the skin without blocking automatic spraying systems. Kenostart Spray and Dip has excellent disinfecting and conditioning properties.

Available in 20L, and 200L quantities

Kenocidin

Chlorhexidine
digluconate 5mg/g
Teat Dip Solution
for dairy cattle.

Kenocidin (with 12% emollients) is the best solution available to enhance teat condition. It is Chlorhexidine and Menthae Arvensis based.

- ✓ Kenocidin reduces the risk of Mastitis in lactating cows
- ✓ Helps to maintain excellent teat condition
- ✓ Barrier forming properties
- ✓ Successfully tested on all major types of mastitis
- ✓ Chlorhexidine based with Menthae Arvensis

Available in 20L, and 200L quantities

Kenocidin Spray & Dip

Chlorhexidine
Diguconate 5.0mg/g,
Teat Spray Solution
for dairy cattle.

- ✓ Chlorhexidine based
- ✓ Registered in 23 countries
- ✓ Guarantees optimal disinfection and teat conditioning

Available in 20L, and 200L quantities

Post Dipping

BIOCIDAL TEAT DIPS

The risk of contamination following milking is high as the sphincter can stay open, typically for up to an hour. It's the teat canal that keeps Mastitis Pathogens out. A teat-end in top condition is important as it restricts colonisation of the mammary gland.

- ✓ Easy to apply
- ✓ Fast acting against Staphylococcus, Streptococcus Uberis and E-Coli
- ✓ Soft on the udder and skin
- ✓ The distinctive blue protective film ensures all targeted areas are covered
- ✓ Long lasting – 26 days after mixing

KenoMix

Strongest Disinfectant Available

A post milking teat dip for teat disinfection and protection. KenoMix is a powerful and long lasting Chlorine Dioxide (CLO₂ based) teat dip. The solution is mixed with the new formula Activator on-site; all you need to do is shake the solution.

Available in a 4.75L drum (plus 250ml activator) or a 19L drum (plus 1L activator)

KenoMix SD

KenoMix SD is a strong post milking teat spray. This chlorine dioxide solution is mixed with the KenoMix teat-dip solution.

NB: The mixed solution will last for as long as 26 days.

Available in 19L (plus 1L activator) quantities.

Kenodin SD

Our entry level iodine based teat spray.

Available in 200L and 1,000L quantities

Parlour Equipment

Cleaning & Hygiene

Where milk comes into contact with your milking and cooling equipment, contamination and high bacterial counts can persist. A simple, inexpensive cleaning routine can eliminate this source of contamination.

The Agri Caretrade team offer an extensive hygiene audit, targeting the areas you wish to improve. We will recommend the use of appropriate chemicals from the extensive CID Lines range.

These include traditional detergents, a unique CHLORINE - FREE range and products suited to ROBOT Milking.

Kenocid 2100 5%

Active stabilised peracetic acid.

- ✓ Final rinse
- ✓ Cluster spraying/ flushing
- ✓ Cluster flushing (automatic system)

Available in 25kg & 220kg quantities

Dm Cid Pho Cid

The CID Lines range is a proven market leader, offering the future in cleaning:

- ✓ **DM CID** a chlorinated, alkaline cleaner and detergent.
- ✓ **PHO CID** an acid descaler (for use in tandem with DM CID) is a simple, effective solution for plant cleaning and disinfection.

All available in 20L and 200L quantities

The unique CHORLINE FREE range

Dm Cid Ultra Pho Cid Ultra

Demand for CHLORINE FREE products is increasing dramatically and the DM CID Ultra range is the ideal solution:

- ✓ **DM CID Ultra** - an alkaline cleaner and disinfectant for CIP installations, milking installations and milk tanks. Tested to standard EN 1276.
- ✓ **PHO CID Ultra** - an acid based product to clean and disinfect milking machines in one routine/cycle. It is Phosphor, Sulfate & Nitrate FREE.

All available in 20L quantities

Robotic Milking

Whilst Robotic Milking Systems have grown dramatically in popularity, driven by the benefits of consistency accuracy and repeatability, dairy hygiene remains critical. The CID Lines range of Robotic System chemicals are a pivotal part of the process.

DM Clean Super

- ✓ Chlorine Free
- ✓ Safe at high temperatures
- ✓ Contains Potassium Hydroxide and Sodium Hydroxide

Available in 25kg quantities

Pho Cid R

An acid cleaning agent for descaling milking robots at high temperatures.

- ✓ Contains Citric Acid Monohydrate and Methanesulphonic Acid
- ✓ Safe at high temperatures

Available in 22kg quantities

DM Clean Super is Non Foaming

Kenocid 2100 R

A concentrated cleaning and disinfecting agent based on 5% peracetic acid for CIP systems

- ✓ Acid disinfectant for robots
- ✓ Based on peracetic acid (5%) and hydrogen peroxide
- ✓ Strong oxidiser

Available in 25kg quantities

Barn, Parlour & Equipment Hygiene

The parlour is constantly in use and keeping surfaces clear of pathogens is imperative. Expert advice suggests that the parlour should be rinsed daily with water and cleaned with detergent & then disinfected weekly. Robotic parlours tend to become dirtier and may need cleaning every two days.

Kenosan

Kenosan is both "ultra" adhesive and penetrates/disperses ingrained dirt, ground in manure and the most heavily soiled areas, even at very low dilutions.

- ✓ It's unmatched adhesion and revolutionary sticky foam, ensure extended contact time, reducing time, effort and excessive use of water.
- ✓ 1% dilution rate
- ✓ Safely apply on all surfaces and in all environments

Available in quantities of 22kg and 240kg

Virocid

A highly-concentrated disinfectant with 4 active ingredients.

Proven record in combating key diseases:

- Foot & Mouth
 - Influenza
 - Bovine Enterovirus
 - Mycoplasma
 - Vesicular stomatitis virus
 - Bovine virus diarrhoea
 - Brucella abortus etc.
- ✓ Virocid also controls foodborne zoonoses, including: Campylobacter, E.Coli and Salmonella at low dilutions (0.25 to 0.5%)
 - ✓ Virocid can be sprayed, hot-fogged or applied as a foam. It has a long residual action.
 - ✓ Virocid sprayed at 0.5% (1:200)-0.0019ppm/
Virocid foamed at 0.5% (1:200)-0.0016ppm

Available in 10L, 20L and 200L quantities

Biosafe

Biosafe the multi-purpose vehicle and equipment cleaner.

A highly effective non-corrosive cleaner designed for vehicles, sensitive metallic surfaces such as aluminium, copper, zinc and farm equipment.

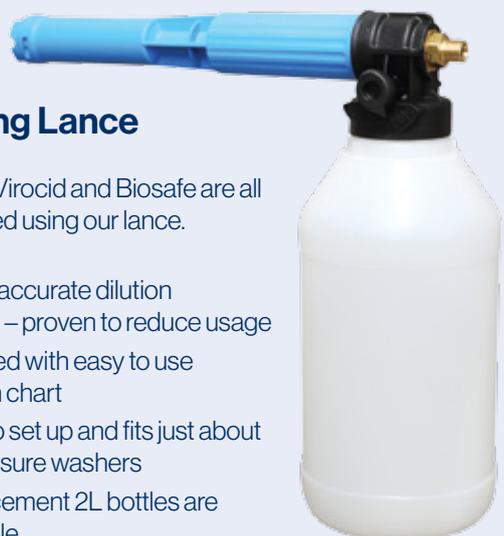

- ✓ Safe
- ✓ Protects and Cleans
- ✓ Fast Rinsing
- ✓ Apply using a high-pressure foaming lance with cold water

Available in 20L quantities

Foaming Lance

Kenosan, Virocid and Biosafe are all best applied using our lance.

- ✓ Highly accurate dilution control – proven to reduce usage
- ✓ Supplied with easy to use dilution chart
- ✓ Easy to set up and fits just about all pressure washers
- ✓ Replacement 2L bottles are available

Cubicle Hygiene

Dry cubicle conditions dramatically reduce the moist and warm conditions in which bacteria thrive, helping to manage the incidence of Mastitis.

Kenolit

A highly absorbent organic powder designed to keep bedding ultra-dry. Kenolit also keeps teat skin and teat ends in the best possible condition. It is a non-irritant, which is perfect for calves.

- ✓ Ready to use with high drying capacity
- ✓ Ecologically safe & phosphate free
- ✓ Reduces the production of ammonia
- ✓ Non corrosive and safe for all animals and skin types
- ✓ Creates a less attractive environment for flies
- ✓ Non-irritating aroma for both humans and animals
- ✓ Contains no organic matter avoiding the creation of a favourable environment for bacterial growth

Available in quantities of 40 x 25kg

Hydramix Lime

Nadins - One product multi-application natural lime ideal for use in cow cubicles, poultry and stock sheds or in small paddocks and for horticultural applications.

Increase yields by promoting improved hygiene and healthier livestock. Nadins Hydramix Lime controls E-Coli, and helps to prevent mastitis and digital mastitis. Non-burn, it can be disposed of directly in slurry.

- ✓ Highly absorbent
- ✓ Free flowing
- ✓ Assists odour control
- ✓ Creates non-slip surfaces reducing the risk of injury to livestock
- ✓ Low dust levels

Available in 40x25kg damp proof polythene bags or 1,000kg tote bags

"See Page 21 for all the brushes, masks and gloves needed for cleaning."

Calving Areas & Pen Hygiene

CALF PEN HYGIENE - Cryptosporidiosis and Coccidiosis Prevention.

Calf pneumonia and calf scours cost the dairy sector many millions every year. Whether it be death, reduced feed conversion or limited growth, the costs of veterinary treatment will quickly add up.

Kenocox reduces Neonatal Calf Diarrhoea, particularly in the critical early days after birth. It is highly effective combatting the spread of NCD where young animals are in close confinement.

Kenocox

Kenocox is a broad-spectrum disinfectant highly effective against endoparasites.

BEST APPLIED
WITH LANCE

HIGHLY EFFECTIVE

- ✓ Kills the sporulated and unsporulated forms of the crypto oocyst
- ✓ Bacteria – pseudomonas aeruginosa, Staphylococcus aureus and Proteus vulgaris
- ✓ Works safely on all surfaces - non corrosive
- ✓ Phenol FREE – safe for humans and animals

Available in 1L and 10L quantities

Foaming Lance

Kenocox is best applied using our lance:

- ✓ Highly accurate dilution control – proven to reduce usage
- ✓ Supplied with easy to use dilution chart
- ✓ Easy to set up and fits just about all pressure washers
- ✓ Replacement 2l dilution tanks available

"For Kenosan Detergent, the ideal preparation for Kenocox."

See Page 13

Calf Hut Hygiene

CLEANING PROTOCOLS

1 Remove All Removable Equipment

- ✓ Take away all the removable equipment (buckets etc.) and clean and disinfect them according to the protocol described below.
- ✓ Goal: no recontamination when cleaning the room itself.

2 Dry Cleaning

- ✓ Removal of manure, litter, feed residues
- ✓ Goal: increases efficacy of the main cleaning

3 Apply Detergent

- ✓ Foam with 1½% KENOSAN, allow 0,3L solution/m²
- ✓ Minimum 30 minutes contact time
- ✓ Goal: decreases time and increases efficacy of main cleaning

4 Main Cleaning

- ✓ High pressure: mechanical cleaning (50-150 bar and 12-30 Litres/min.)
- ✓ All surfaces: walls, floors, feeders and ceiling
- ✓ Leave to dry

5 Anti Parasitic Disinfection

- ✓ Spray or foam with 2-4% KENOCOX, allow 0,4L solution/m²
- ✓ Minimum 2 hours contact time
- ✓ Rinse buckets before re-using

Skin & Hoof Care

The ultimate PROTECTIVE BARRIER SPRAY for skin & hooves

HIGHLY EFFECTIVE

*"Available
as a 300ml
can."*

Kenofix

Kenofix is a multi-purpose protective barrier spray containing Tea Tree Oil which simultaneously soothes and moisturises the wound or infection.

It works in 3 ways:

1. Acts as a powerful disinfectant
2. It's a protective barrier spray which dries quickly, providing superior skin adhesion
3. Reduces tail and ear damage from biting, saving you money.

Application

For Skin Conditions :-

1 application for 3 consecutive days

For Hooves :-

1 application daily for 6 consecutive days

Aerosol Spray

- ✓ Spray can be applied at all angles
- ✓ No shaking required

Skin & Hoof Care

HOOF HYGIENE

Promoting the very healthiest claws

After Mastitis and Reproductive Failure, Lameness is the 3rd biggest issue for many farmers.

The associated financial loss is significant and may include the cost of treatment, reduced milk yield, an extended reproductive cycle and potentially increased culling.

The incidence of lameness has increased steadily over the past 20 years, with over 50% of animals suffering lameness at least once a year on many farms.

Contributory factors include:

- ✓ Increasing confinement on harder, wetter, more abrasive floors
- ✓ Conditions which are not conducive to sufficient rest
- ✓ Exposure of hooves to wet/damp manure
- ✓ Poor nutritional management which encourages Rumen Acidosis
- ✓ Slippery floors
- ✓ Response times to lameness which are too slow
- ✓ Poor trimming techniques and schedules
- ✓ Genetic issues
- ✓ The associated pressures with high incidence of high infection

Use **Hoof-Fit** or **Pediline** for Healthy Claws

Hoof-Fit

Over the past 20 years Hoof-fit has been specially developed to safeguard long-term claw health.

This highly effective solution, is made from organic chelated minerals and is enriched with ALOE VERA in a alcohol base.

Poor hoof health has been proven to cost as much as €300 (£250) per dairy cow annually. Prevention can reduce digital dermatitis and the need for further expensive treatment.

Call Agri Caretrade today and find out how you can save money with Hoof-Fit!

Contains:

- ✓ Organic chelated zinc & copper
- ✓ Aloe Vera extract
- ✓ Alcohol
- ✓ Skin care agents
- ✓ Special Binding agents to enhance adhesion

Available in liquid, gel and aerosol

Pediline Pro

An excellent preventative solution for a wide range of hoof related issues.

Pediline Pro dries and harden the hooves, soothes whilst encouraging healthy tissue growth. Effective even where there are high levels of organic content.

This product is free of heavy metals and formaldehyde.

Available in 25kg quantities

Call for more information and to find out how Agri CareTrade can save you money . Tel. +44 (0) 28 9446 2233

Nutrition

Biocell Farm Mix - Pure Live Yeast

Improve production and health for high performance dairy cows.

- ✓ Maintains stable rumen PH – reducing the risk of acidosis
- ✓ Enhances enzyme activity – stimulating fibre digestion
- ✓ Efficiency of rumen function increased – improving feed conversion
- ✓ Converts lactic acid in high starch diets – increasing supply of energy and protein
- ✓ Reduces methane production – reducing waste and increasing efficiency
- ✓ Biocell Farm Mix – easily mixed in feed or incorporated in TMR
- ✓ Studies have shown increased milk yield and levels of butterfat

Available in 12.5kg bags (to be fed at a rate of 25grms per head/day)

PROMOTES HIGH PERFORMANCE

Platinum Drenches

Designed to improve health and fertility in dairy cows, cattle and sheep of all ages.

Why use Drenches?

- ✓ Improved fertility
- ✓ Increased growth rates
- ✓ Reduced calving and lambing periods
- ✓ Improved calf and lamb vitality from birth
- ✓ As a stimulant for the immune system to aid recovery from illness

When to use Drenches...

- ✓ Store cattle at turnout for the grazing season
- ✓ One month before bulling
- ✓ At calving/lambing

Available in 2.5l and 5l quantities

“We ran out of Biocell Farm Mix after an ordering error. This was actually interesting because after 2-3 days the yield in the bulk tank dropped by 400 to 500 litres on each day’s production. Thankfully, once the Farm Mix arrived and was re-introduced into the diet, the lost yield returned after 4 to 5 days.”

“This was a great basic and unplanned trial, which simply showed that Biocell Farm Mix works very well and actually does more than it claims to. Clearly, in a market full of yeasts which may or may not work, this one worked and continues to work. To put it another way, we will not be running out of Farm Mix again!”

Sean Sowray. Bowes Green Farm. Bishop Thornton

THE COMPLETE HEALTH PACKAGE FOR CALVES

Biocell Lac

A live yeast designed to enhance Calf Health, Vigour & Vitality.

Fully EU Approved, Biocell Lac is blended into a dextrose base for improved palatability & easy mixing. The solution encourages early rumen development, allowing higher levels of concentrate to be introduced into the diet more quickly, both prior to and during weaning.

- ✓ Calf course mix can be increased by up to 25% in the weaning period
- ✓ Increases beneficial bacteria
- ✓ The yeast does not degrade in the stomach
- ✓ Not affected by antibiotics
- ✓ Stimulates natural immunity to prevent calf scours and bloat in lambs.

Available in 5kg tubs

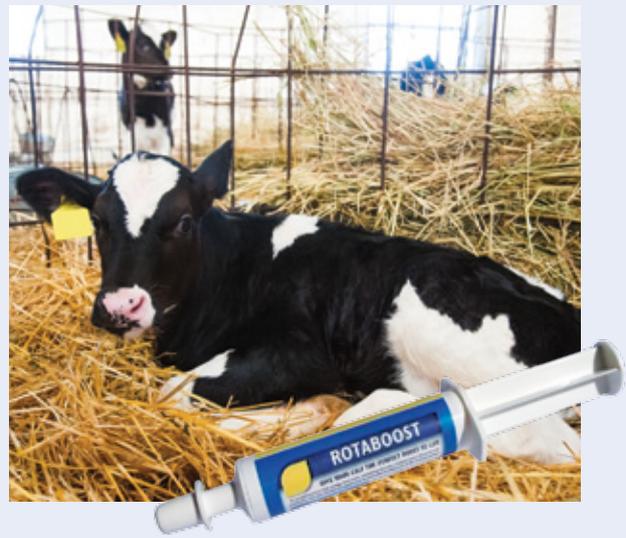

Rotaboost

At birth, a stimulant for disease resistance.

Applied to the back of the tongue within the first 12 hours after birth, Rotaboost provides high levels of vitamins, chelated trace elements and probiotics for a healthy gut.

Available in 12x30g syringes

Slurry Treatment

Slurry Cell – Bacteriological Slurry Treatment

- ✓ Breaks crusts
- ✓ Reduces nitrogen loss
- ✓ Improves soil breakdown
- ✓ Reduced need for stirring
- ✓ Easier and quicker to pump out
- ✓ Fewer umbilical blockages
- ✓ Low odour
- ✓ Lower ammonia levels in buildings

Available in 6 x 1kg quantities

Consumables

Gloves

A range of high quality Nitrile gloves & PVC over-sleeves.

- ✓ Gloves in all sizes
- ✓ A range of cuff lengths
- ✓ Includes Chemplus - extra heavy duty for increased durability
- ✓ Over-sleeves available
- ✓ Green Grip
- ✓ Thermal Grip
- ✓ Solvex

Brushes

An extensive range of brushes, including yard & platform brushes.

- ✓ A large range of brushes
- ✓ Tank and general purpose brushes
- ✓ Mops and squeegees

Paper

- ✓ Dairy Wipe - universal paper
- ✓ Udder Wipe - our premium brand, softer and more absorbent

Masks
